

Amendments In The Claims

Claim 1 (allowed);

1. A method of measuring a data signal to create an eye diagram of that signal, the method
2 comprising the steps of:
- 3 (a) setting a hits count to zero;
 - 4 (b) comparing the instantaneous voltage of a clock signal associated with the data
5 signal to a clock threshold voltage to produce a logical clock signal;
 - 6 (c) delaying the logical clock signal by a selected first amount to produce a delayed
7 logical clock signal;
 - 8 (d) comparing the instantaneous voltage of the data signal to be measured to a data
9 threshold voltage to produce a logical data signal;
 - 10 (e) delaying the logical data signal by a selected second amount to produce a delayed
11 logical data signal;
 - 12 (f) delaying the delayed logical clock signal by a selected third amount to produce a
13 doubly delayed logical clock signal;
 - 14 (g) capturing the value of the delayed logical data signal in response to the delayed
15 logical clock signal;
 - 16 (h) capturing the value of the delayed logical data signal in response to the doubly
17 delayed logical clock signal;
 - 18 (i) incrementing the hits count each time a value captured in step (g) is different to that
19 captured in step (h);
 - 20 (j) repeating steps (b) through (i) until a selected condition is satisfied;
 - 21 (k) subsequent to step (j), storing the count of step (i) in a data structure indexed by
22 the difference between the first and second amounts and by the data threshold
23 voltage;
 - 24 (l) repeating steps (a) through (k) with different combinations of the data threshold
25 voltage and difference between the first and second amounts; and
 - 26 (m) generating an eye diagram from the hits counts stored in the data structure.

Claim 2 (CANCELED).
